Address environmental change in your business

Be proactive in managing security issues.

Accurate and efficient in providing the Business Assurance process

Security Governance is one of the fundamental building blocks in ensuring that organizations establish and maintain an effective security posture. An effective Security Governance environment will help organizations to meet their risk management requirements, and ensure that security is both driven by business requirements, and is appropriate to the environment.

Not only covering your business requirements, an effective implementation of Security Governance will address your risk posture, security spending, and ensure accountability is appropriately embedded in your organization.

Security-Assessment.com provides comprehensive services around Security Governance and related service requirements. Our proven methodology and processes will ensure that your overall security profile provides the appropriate level of security, at the appropriate cost.

Regulatory controls and international standards are now driving Security Governance requirements, with greater levels of accountability being enforced upon businesses. Whether you are looking to ISO 17799 compliance, or need to meet the requirements of the Sarbanes - Oxley Act, your security governance is the driving factor in ensuring that the rest of your environment is secure.

Security-Assessment.com works with your organization to map out your business, identify your business security requirements and security posture, and design a Security Governance capability to match your needs.

Typical issues that need to be addressed include:

- Compliance requirements,
- Security architecture,
- Security organization,
- Risk management assessment and implementation,
- Accountability definitions.

With effective Security Governance in place, you will be better positioned to address security at all levels within your organization.

Managing Security Governance to an defined and clear standards, and consistently applied across your organization will provide your

organisation's staff, clients, customers and/or trading partners the confidence that their information is held and managed in a secure manner, and in compliance with world best practices.

Security-Assessment.com's Security Governance services provide the following features to assist organisations:

- **Business Security Modeling:** An organisation, a department or a project within an organisation can be modeled to map business functions and processes against required security levels to ensure that security requirements are designed into the overall company culture and direction.
- **Business Impact Analysis:** An analysis of the requirements for confidentiality, integrity and availability can be performed to assess how critical an application, a group of applications or infrastructure is to the organisation. The Business Impact Analysis can also be used to prioritise and provide justification for security work.
- **Risk Management:** Security-Assessment.com will work with organizations to identify the acceptable risk posture of the organization, identify current risk profile, and create road maps to implement Risk Management to acceptable and appropriate levels.
- **Strategic Security Framework:** As a part of the process, Security-Assessment.com helps organizations to implement an appropriate Strategic Security Framework, proven in a number of large organizations. Show demonstrable level of compliance management. Meet your duty of care responsibilities.
- **Benchmarking:** Any Security Governance implementation requires compliance and measurement systems to ensure that the Governance environment remains effective following implementation.
